

# COVID-19 (Coronavirus)

## Results Filter for Demographics

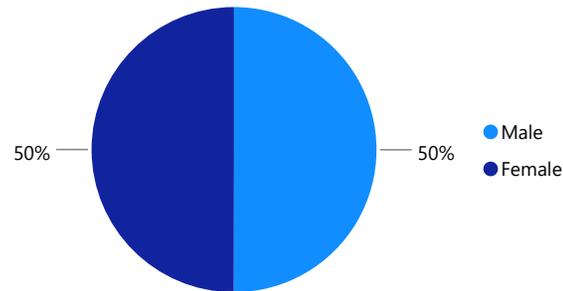

Nevada's Population

Demographics are currently filtered to Nevada's population (3,149,234).

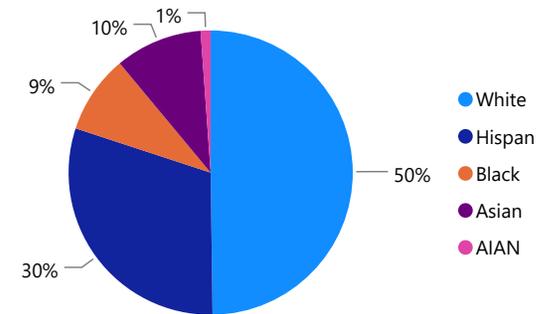

### Age

### Gender

### Race/Ethnicity

COVID-19 can affect people of any age. Adults in Nevada have been tested and diagnosed with COVID-19 more frequently than children. However, children can also be affected by COVID-19. Children can spread COVID-19 even if they show no signs or symptoms. Adults aged 60 years old and older have died from COVID-19 more frequently than any other age group.

A significant number of laboratory records for people tested and confirmed cases are missing race and ethnicity information. This is similar to the completeness of these data fields in other states and nationally. We are actively working to improve data completeness, and as improvements are made these data may change significantly.
